My first block!

Hoi

Disclaimer

This is a very early version, but some of us already need it quite soon. Anyway, let me know if there are any problems at `l.onrust@let.ru.nl`.

How to use this stuff to create a poster

Stop using this if you are not comfortable with LaTeX. In the other case, proceed with caution.
This file (`main.tex`) contains the presentation. If consists of two `columns` in a `columns` environment. Each column then consists of multiple blocks, separated by whatever you think is suitable (`medskip`, `bigskip`, `vfill`, ...).

Formulae

We approximate the integral with samples $\{\mathcal{P}^{(i)}, \Theta^{(i)}\}_{i=1}^{I}$ drawn from $p(\mathcal{P}, \Theta|\mathcal{D})$:

$$p(w|\mathbf{u}, \mathcal{D}) \approx \sum_{i=1}^{I} p(w|\mathbf{u}, \mathcal{P}^{(i)}, \Theta^{(i)}) \tag{1}$$

and $p(w|\mathbf{u}, \mathcal{P}, \Theta)$ is given by the recursive function with $p(w|\pi(\emptyset), \mathcal{P}, \Theta) = 1/V$ and

$$p(w|\mathbf{u}, \mathcal{P}, \Theta) = \frac{c_{\mathbf{u}w\cdot} - d_{|\mathbf{u}|}t_{\mathbf{u}w\cdot}}{\theta_{|\mathbf{u}|} + c_{\mathbf{u}\cdot\cdot}} + \frac{\theta_{|\mathbf{u}|} + d_{|\mathbf{u}|}t_{\mathbf{u}\cdot\cdot}}{\theta_{|\mathbf{u}|} + c_{\mathbf{u}\cdot\cdot}} p(w|\pi(\mathbf{u}), \mathcal{P}, \Theta), \tag{2}$$

where the counts in partition $P_{\mathbf{u}}$ correspond to $G_{\mathbf{u}}$.

Drake

Started from the bottom.

My second block!

Hoi! We refer a paper from here [1, 2].

My funniest block!

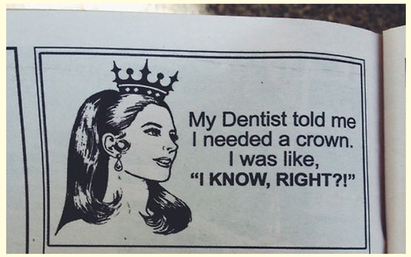

Figure: An example of figure.

And the obligatory boring block...

Table: An example of table.

	jrc	1bw	emea	wp
jrc	3.65	10.22	9.91	9.98
1bws	9.58	7.31	9.89	8.94
emea	9.23	10.16	1.88	9.72
wps	9.12	8.83	9.97	7.76
